

As an independent full service engineering company, Advanced Engineering can design, calculate, draft and price technical installations for the entire installation spectrum.

Our clients are property developers, architects, contractors, builders, governments and facility management companies.

Market

For both new buildings and renovations, we can support and assist in the design, implementation, management and maintenance of technical installations.

Advanced Engineering is active in the following market segments:

- Utility
- Residential & Health care buildings
- Industry
- Telecom and Internet datacenters

Drafting works

- Electrical installations
- Climate installations (HVAC)
- Telematics and communication installations
- Security installations
- Transport installations
- Sanitation facilities

All drawings are made in AutoCad® 2008 or higher.

But also:

- Drawings for NEN-EN 50110 ("Dutch NEN3140") inspections
- Scanning and digitizing of drawings
(Both construction and installation drawings)
- Evacuation maps and plans.
- Various building permits
- Complete or Quick-scans for Dutch building regulations ("bouwbesluit")

Pricing

From budget determination during initial design phase up to the complete breakdown of the full detailed specifications and tender drawings, our experienced staff can price technical installations in each phase of your project.

Calculation

With modern software applications we can provide all necessary technical calculations.

- Lighting and cable calculations
- Selectivity Calculations
- Energy Performance Calculations
- Climate calculations

With Advanced Engineering you are always assured of a fully integrated design, with favourable investment and management costs.

Repro Services

We can print, plot, copy and scan all formats in both black and white and full colour.
